

SPHEREboard for CyberArk PAM

Reduce risk by maximizing protection of your privileged accounts

Protecting privileged accounts helps keep your organization safe from potentially disastrous security breaches. But implementing a PAM solution can require a major investment of time and resources. Now SPHEREboard for CyberArk PAM helps you discover, onboard, and protect more accounts, more quickly—reducing the risk of identity-based breaches and speeding time to value.

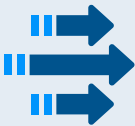

With SPHEREboard for CyberArk PAM, your organization can:

Respond quickly
to urgent security incidents

Meet escalating requests from auditors, regulators, and third parties

Speed implementation of CyberArk PAM, maximizing ROI

Strengthen its overall security posture by reducing exposure

Enumerate your AD user and group estate to understand complexity and de-risk years of **unfettered sprawl**

Resolve risk now—and proactively protect against future breaches

With SPHEREboard for CyberArk PAM, you can ensure that critical accounts are onboarded—reducing risk, increasing protection, and maximizing your investment in CyberArk.

What can SPHEREboard for CyberArk PAM do for you?

Untangle the web of identities and permissions, clean up the mess, and reduce risk

SPHEREboard for CyberArk PAM is the first purpose-built solution for CyberArk Privileged Access Management (PAM) Solutions that discovers, analyzes, and automates account vaulting and protection. Our comprehensive solution integrates critical risk-reduction capabilities—from discovery to remediation to ongoing protection. Intelligent discovery surveys and identifies all your privileged accounts. Automated remediation vaults accounts without heavy lifting by your teams or unintentional outages. And sustainability processes ensure that controls are met on an ongoing basis.

Intelligent Discovery: Know your privileged accounts, all of them

SPHEREboard's intelligent discovery capabilities help you know more about your privileged accounts than ever, so you can protect them more effectively. After all, you can't resolve risk you don't know about. SPHEREboard's intelligent discovery capabilities bring you:

- › **A clear view of all your accounts**, no matter where they reside.
- › **Extensive coverage** that enables you to scan all of your foundational, enterprise source systems—including Active Directory (AD), Windows, UNIX, and databases (including Oracle, Sybase, SQL, and more), as well as CyberArk PAM.
- › **A comprehensive, detailed inventory** of all accounts and entitlements, classifying them to determine if they have elevated permissions, as defined by your account controls.
- › **Detailed analysis** of accounts with privilege, identifying gaps and potential issues.
- › **Careful examination of critical service accounts**, which pose significant risk because of their access to core applications and capabilities. SPHEREboard can determine which service accounts are highly privileged and how a service account is being use—all to help prioritize remediation.
- › **Seamless integration** with your current identity solution and infrastructure.

Fast Remediation and Certification: Protect more accounts, more quickly

By identifying vulnerable accounts via intelligent discovery, SPHEREboard can take swift action to protect them—and reduce exposure. For example, elevated accounts not yet vaulted in your CyberArk Privileged Access Management (PAM) Solutions become urgent priorities for onboarding. SPHEREboard's remediation capabilities deliver:

- › **Precise, automated workflows** that drives onboarding to CyberArk Privileged Access Management (PAM) Solutions, significantly increasing the number of protected accounts.
- › **Automated processes** that speed progress and reduce manual processes and staff involvement.
- › **Powerful ownership capabilities** that help propose and confirm the owners of elevated accounts. After all, you can't remediate an account until you know its owner.
- › **Ongoing insights** via a centralized dashboard give you a window on progress throughout remediation, while extensive reporting captures the current protection status of accounts with elevated privilege.

Ongoing Sustainability Processes: Keep your estate clean, now and as you grow

Protecting your organization from the threat of security breaches requires ongoing vigilance to avoid recurring issues. SPHEREboard's sustainability processes provide:

- › **The ability to ensure that stringent controls are met**—and risk reduced—on an ongoing basis.
- › **A clear view of new privileged accounts**, pinpointing unauthorized access and other security risks as they appear via stock and flow reporting and other reports.
- › **Proactive monitoring and automated remediation** that keeps your identity ecosphere protected and clean as your organization evolves. That's Identity Hygiene in action.

SPHERE and CyberArk

Two leaders dedicated to protecting your privileged accounts—and reducing risk

SPHEREboard for CyberArk PAM brings together two complementary solutions to raise risk reduction to new heights. **CyberArk Privileged Access Management (PAM) Solutions** provide best-in-class privileged access management. **SPHEREboard** complements it with advanced tools for identifying and resolving risk, tools that go far beyond the capabilities of other solutions. The result? SPHEREboard for CyberArk PAM helps you reduce risk like never before—and ensure ongoing sustainability.

SPHERE is the pioneer and leader in **Identity Hygiene** and the creator of a portfolio of **SPHEREboard** solutions that make it happen—protecting millions of accounts across organizations from the threat of security breaches. Identity is the acknowledged blind spot in any organization's security perimeter, with known and hidden issues, from buried privileged access to unprotected service accounts. Our proven SPHEREboard solutions uncover and resolve identity-based risks, quickly and easily, so organizations can continue to grow and thrive without disruption—while meeting the needs of auditors, regulators, and cyber insurance providers.
